

CONVERSATION CONFIRMATION

Date: April 2, 2012

Subject: Navy/ Northrop-Grumman–Bethpage: Followup from EPA meeting with Massapequa Water District (MWD)

Person Contacted: Steve Scharf, NYSDEC project manager

Phone: (518) 402-9620

We discussed the following:

- (1) MWD Meeting: I notified Steve that based on the EPA's Thursday, March 29 meeting with the Massapequa Water District, our understanding is that MWD would not publicly object to NYSDEC's public distribution of the PRAP for OU-3. Steve noted that he would inform his management about this new development.
- (2) OU-3 PRAP: I asked Steve to please send EPA a copy of the draft PRAP for OU-3, noting that we would not share it with any outside parties. Steve said that he is not in a position to send it, but that would recommend for his Branch Chief, Jim Harrington, to discuss this with EPA management. He also said that NYSDOH recently completed its review of the draft PRAP, and provided comments. Steve said that, due to EPA's interest in the schedule of the PRAP distribution, he would ask Jim Harrington to discuss the schedule for public distribution of the PRAP with EPA management.
- (3) FS for OU-3 : I told Steve that George Pavlou had requested a copy of the FS for OU-3. I noted that I have a copy of the draft FS, dated November 2010, but not the final FS. Steve said that he plans to e-mail it to me by COB today, or tomorrow at the latest. The Final FS for OU-3 has been split into two separate FS documents, one for onsite remediation and the other one for off-site remediation. Northrop-Grumman has some issues with the on-site FS regarding PCB remediation in soils. These issues are being worked on. Grumman's past issues with the off-site remediation have been at least somewhat resolved.
